2.3 Email Gateway
How does the PGP/GPG-Mailinterface work?

Using the Joker.com email interface, you may send 'commands' to a special address at Joker.com by email. Those commands may consist of registration orders, domain renewals or modifications.

The Joker.com mail interface address is disclosed once you signed up as a reseller.

The emails making up the commands follow a simple format, which is described here in section 'Requests'.

For security reasons, each request which is sent to the mail gateway has to be signed using PGP or GPG. This means, you need to have a pgp/gpg-installation on your machine. Some tools which can be used for this:

- Gnu GPG
- Enigmail for Thunderbird

Emails which are not signed correctly will not be processed. All requests to the gateway have to be sent as PGP/GPG signed mails to the Joker mail-robot (you will receive the exact address if you have registered yourself as a reseller).

Mails are expected to be sent in the "**traditional**" format (signature is part of the message body), **not** (for example) in MIME encapsulated format!

The actual request (the command to be peroformed) has to be put into the subject of the email. Further details (for example the full qualified domain name) have to be put in the message body.

Example:

Subject: modify domain

-----BEGIN PGP SIGNED MESSAGE-----

Hash: SHA1

tld:org

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Basics

Where are the replies of the mail-gateway sent?

The replies of the gateway are generally sent to the "reply-to"-address. In order to specify that address, you will have to fill in the reply-to-field within the e-mails you send to the mail-gateway.

Keywords: replies mail-gateway reply-to

Last update: 2007-03-27 15:15

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Basics

How do I change my robot-email-address?

The Joker.com system identifies you using your pgp-signature and your email-address, so you have to provide a new pgp-key, if you want to change your robot-email-address. Without changing the pgp-key, our system cannot grant you access to the domains, you have registered at joker.com.

Please, follow the 3 steps below to **change your robot-email-address**.

1. Create a new contact with your new email-address using the mail-gateway.

2. Change the billing-c of **all** your domains using this new contact, which contains the new robot-email-address. Use the "list domains"-request for a listing of your domains.

3. Go to https://joker.com/index.joker?mode=resellerpages&stage=step13b and provide your new email-address and your new pgp-key and wait for our response mail.

Keywords: change robot-email-address robot e-mail address

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Basics

Should I use PGP or GPG?

It does not matter if you use PGP or GPG, the version is not important as well. Just make sure that your program is able to put PGP signatures into your mail in the format described above.

Please have a look at the following web sites to get the newest versions and lots of explanation on the programs.

http://www.pgpi.org/

http://www.gnupg.org/

ATTENTION:

Users of GPG have to use the following flag:

gpg --clearsign --force-v3-sigs ....

Otherwise our system will reject your signed mails.

Keywords: PGP GPG signature

Last update: 2007-03-30 15:53

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Basics
General Instructions

All requests do follow the same scheme:

- each key:value pair is unique in application.
- each key:value pair is one line finished with carriage return
- each key is delimited by a colon ":" from the value

You have to send the request as signed email to the Joker.com mail gateway address. This address is disclosed once you signed up as a reseller of Joker.com.

Each email uses a simple, special format, which is described under the different request-types.

For security reasons you have to pgp-sign each mail you send to the mail-gateway, so you need a pgp-installation on your machine. Unsigned or invalid mails will be ignored.

Emails without a valid subject (request-type) will produce an error. In this case you will receive an error message as response.

Valid requests are normaly processed in realtime. Under certain circumstances (Registry-Downtimes, System maintenance, etc.) it is possible, that requests have to wait for processing. It is highly recommended to ask our support before you repeat such requests.

The descriptions for the requests do all follow the same scheme:

Topic 'introduction' - a short introduction of the request, what is the request for.

Topic 'request fields'

- which fields are required or allowed for a request
- which character are allowed for a request field (the valid character sets are described with PERL-REGULAR-EXPRESSIONS)
- one or more examples for a valid request

Requests

What is a macro?

A macro is used within the definition of a request.

A macro starts with an @.

Example: @cont or @email or @ns

Every time you find a macro, please check the definition of this macro for further information.

Keywords: macro definition

Last update: 2007-04-02 15:20

Macros
E-mail Address

@email

This means an email address in the following format:

Valid values (.com/.net only):
foo@bar.com
foo@bar.com#1
foo@bar.com#15

Invalid values:
Hans Nase <hans@foo.com>
hans@foo.com (Hans Nase)

Valid values (.org/.info/.biz/.del.cn only):
foo@bar.com
foo-bar@bar.com

Invalid values:
Hans Nase <hans@foo.com>
hans@foo.com (Hans Nase)

foo@bar.com#15

Keywords: email address

Last update: 2011-08-11 15:34

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Macros
.com/.net Contacts

new-handle (implicit creation of a new contact)

This means the definition of a new contact. If a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created and we will add a numerical suffix to the email address that starts with "0" and increases by "1" for every existing contact with such a emailaddress in the JOKER-DATABASE.

ATTENTION:

The name of the request field depends on the context. if you want to create a contact for the owner-contact, you have to replace the "-" at the beginning of the fieldname with "owner-contact".
If you want to create a contact for the admin-contact, you have to replace the "-" at the beginning of the fieldname with "admin-contact".
If you want to create a contact for the tech-contact, you have to replace the "-" at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the "-" at the beginning of the fieldname with "billing-contact".

request-field	valid values	required
-*-individual	[YN]	yes
-*-fname	[\x20-\x7e]{0,80}	yes, if individual = Y
-*-lname	[\x20-\x7e]{0,80}	yes, if individual = Y
-*-title	[\x20-\x7e]{0,80}	no
-*-organization	[\x20-\x7e]{0,80}	yes, if individual = N
-*-address-1	[\x20-\x7e]{1,80}	yes
-*-address-2	[\x20-\x7e]{0,80}	no
-*-postal-code	[\x20-\x7e]{1,32}	yes
-*-city	[\x20-\x7e]{1,80}	yes
-*-state	[\x20-\x7e]{0,80}	no
-*-country	[A-Z]{2}	yes
-*-email	[\x21-\x7e]{5,254}	yes
-*-phone	[\+\x20-\x7e]{4,50}	yes
-*-fax	[\+\x20-\x7e]{0,50}	no

An existing contact (**@cont** or **@same-as**) (.com/.net only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

owner-contact-handle:foo@bar.com#0
admin-contact-handle:foo@bar.com
tech-contact-handle:foo@bar.com#15
billing-contact-handle:foo@bar.com#15

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle:same-as-owner-contact
tech-contact-handle:same-as-admin-contact
billing-contact-handle:same-as-tech-contact

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for (.com/.net)-requests, contact handles for (.info)-contacts are not allowed. If you are referencing to a shortcut like C00783-LRMS, you will get an error.

Keywords: new-handle @cont @same-as admin tech billing

Macros
.com Contacts

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CCOM-<number>,

e.g. CCOM-176269.

ATTENTION:

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request-field	valid values	required
".."-individual	[YN]	yes
".."-lname	[\x20-\x7e]{0,80}	no, if name is given
".."-fname	[\x20-\x7e]{0,80}	no, if name is given
".."-name	[\x20-\x7e]{0,80}	yes, if fname **and/or** lname are not given
".."-title	[\x20-\x7e]{0,80}	no

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

".."-organization	[\x20-\x7e]{0,80}	yes, if individual = N
".."-address-1	[\x20-\x7e]{1,80}	yes
".."-address-2	[\x20-\x7e]{0,80}	no
".."-address-3	[\x20-\x7e]{0,80}	no
".."-postal-code	[\x20-\x7e]{1,50}	yes
".."-city	[\x20-\x7e]{1,80}	yes
".."-state	[\x20-\x7e]{0,80}	no
".."-country	@country	yes
".."-email	@email	yes
".."-phone	[[\x20-\x7e]{1,50}	yes
".."-fax	[[\x20-\x7e]{0,50}	no

An existing contact (**@comcont** or **@same-as**) (.com only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

owner-contact-handle:CCOM-176269
admin-contact-handle:CCOM-176229
tech-contact-handle:CCOM-176269
billing-contact-handle:CCOM-176269

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle:same-as-owner-contact
tech-contact-handle:same-as-admin-contact
billing-contact-handle:same-as-tech-contact

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for .com-requests the contact handles for (.com/.net)-contacts are not allowed. If you are referencing to a shortcut like hans@nose.net#1, you will get an error.

Keywords: new-handle @comcont @same-as admin tech billing

An existing contact (**@netcont** or **@same-as**) (.net only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

owner-contact-handle:CNET-176269
admin-contact-handle:CNET-176229
tech-contact-handle:CNET-176269
billing-contact-handle:CNET-176269

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle:same-as-owner-contact
tech-contact-handle:same-as-admin-contact
billing-contact-handle:same-as-tech-contact

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for .net-requests the contact handles for (.com/.net)-contacts are not allowed. If you are referencing to a shortcut like hans@nose.net#1, you will get an error.

Keywords: new-handle @netcont @same-as admin tech billing

.org Contacts

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CORG-<number>, e.g. CORG-176269.

ATTENTION:

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request-field	valid values	required
".."-individual	[YN]	yes
".."-lname	[\x20-\x7e]{0,80}	no, if name is given
".."-fname	[\x20-\x7e]{0,80}	no, if name is given
".."-name	[\x20-\x7e]{0,80}	yes, if fname **and/or** lname are not given
".."-title	[\x20-\x7e]{0,80}	no
".."-organization	[\x20-\x7e]{0,80}	yes, if individual = N

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created.

ATTENTION

According to the rules of NEULEVEL, the fieldlength for most of the requestfields are limited to 30 characters. Please check very carefully the definitions of the request fields.

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

Please, keep in mind, that if you are using the concatenation of **fname** and **lname**, you have to care that the sum of both fields should not be longer than 30 characters.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

.de Contacts

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CODE-<number>, e.g. CODE-176269.

ATTENTION:

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request-field	valid values	required
".."-individual	[YN]	yes
".."-lname	[\x20-\x7e]{0,80}	no, if name is given
".."-fname	[\x20-\x7e]{0,80}	no, if name is given

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

".."-name	[\x20-\x7e]{0,80}	yes, if fname **and/or** lname are not given
".."-title	[\x20-\x7e]{0,80}	no
".."-organization	[\x20-\x7e]{0,80}	yes, if individual = N
".."-address-1	[\x20-\x7e]{1,80}	yes
".."-address-2	[\x20-\x7e]{0,80}	no
".."-address-3	[\x20-\x7e]{0,80}	no
".."-postal-code	[\x20-\x7e]{1,50}	yes
".."-city	[\x20-\x7e]{1,80}	yes
".."-state	[\x20-\x7e]{0,80}	no
".."-country	@country	yes
".."-email	@email	yes
".."-phone	[[\x20-\x7e]{1,50}	yes
".."-fax	[[\x20-\x7e]{0,50}	yes, but for admin-c and tech-c only

An existing contact (**@decont** or **@same-as**) (.de only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

owner-contact-handle:CODE-176269
admin-contact-handle:CODE-176229
tech-contact-handle:CODE-176269
billing-contact-handle:CODE-176269

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle:same-as-owner-contact

tech-contact-handle:same-as-admin-contact

billing-contact-handle:same-as-tech-contact

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for .de-requests the contact handles for (.com/.net/.org/.info/.biz/.cn)-contacts are not allowed. If you are referencing to a shortcut like hans@nose.net#1, you will get an error.

Macros
Domain renewal

@renew

Here you have to provide the domain name and the renewal period or the desired expiration year on one line. You have to seperate the domain name and renewal period/expire year with an ":" (ASCII 058). The maximum for the renewal period is 9 years.

Examples:

domain1:blafasel.com:2
domain2:hansnose.net:3
domain2:hansnose.info:2005
domain2:hansnose.biz:2

Attention:

If you are using the expire year and the current expire year of the domain is equal or greater than the provided value for that field, the request will not processed.

Keywords: @renew

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format COME-<number>, e.g. COME-176269.

ATTENTION:

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request-field	valid values	required
.."-individual	[YN]	yes
.."-lname	[\x20-\x7e]{0,80}	no, if name is given
.."-fname	[\x20-\x7e]{0,80}	no, if name is given
.."-name	[\x20-\x7e]{0,80}	yes, if fname **and/or** lname are not given
.."-title	[\x20-\x7e]{0,80}	no
.."-organization	[\x20-\x7e]{0,80}	yes, if individual = N
.."-address-1	[\x20-\x7e]{1,80}	yes
.."-address-2	[\x20-\x7e]{0,80}	no
.."-address-3	[\x20-\x7e]{0,80}	no
.."-postal-code	[\x20-\x7e]{1,50}	yes
.."-city	[\x20-\x7e]{1,80}	yes
.."-state	[\x20-\x7e]{0,80}	no
.."-country	@country	yes
.."-email	@email	yes

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

.."-phone	[\x20-\x7e]{1,50}	yes
.."-fax	[\x20-\x7e]{0,50}	no

An existing contact (**@mecont** or **@same-as**) (.me only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

```
owner-contact-handle:COME-176269
admin-contact-handle:COME-176229
tech-contact-handle:COME-176269
billing-contact-handle:COME-176269
```

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

```
admin-contact-handle:same-as-owner-contact
```

```
tech-contact-handle:same-as-admin-contact
```

```
billing-contact-handle:same-as-tech-contact
```

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for .me-requests the contact handles for (.com/.net/.org/.info/.biz/.de)-contacts are not allowed. If you are referencing to a shortcut like hans@nose.net#1, you will get an error.

Keywords: new-handle @mecont @same-as admin tech billing owner

Last update: 2008-08-14 11:46

Macros

Create a dns-configuration

Introduction

With this request you can create or modify a zonefile at the joker-nameserver.

You can add A-Records, CNAME-Records, MX-Records, a nameservice-based Url-forwarding and a frame-based Url-forwarding. Modifing the TTL is not possible.

The format of this request is a little bit different from the other requests. Please check the given examples for how to specify the different zonefile-records.

ATTENTION:

You have to change the nameservers for a domain to the nameservers of joker.com first!

- a.ns.joker.com
- b.ns.joker.com
- c.ns.joker.com

If you would like to use the joker-nameservice, you will have to use **all** joker-nameservers.

It is **not** possible to use the joker-nameservice

- for primary nameservice only
- for secondarynameservice only

All joker-nameservers

- are configured to deny all zone-fetching requests!
- do not query foreign nameservers!

Request Fields

Definition of this request

request-field	valid values	required
domainid	domain	yes
A	ipv4 records	no
CNAME	hostname records	no
MX	mx/pri records	no
URL	url records	no
FRAME	url records	no

Example 1: **create dns-config** (without url-forwarding and without wildcard-matching)

subject: create dns-config [your reference id]

domainid=2.hanenose.net

A:www:194.33.110.19

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

A:mail:194.33.110.19

A:mail2:194.33.110.20

A:@:194.33.110.10

MX:www.hansnose.net:70:mail.nrw.net

MX:www.hansnose.net:80:mail2.nrw.net

MX:@:70:mail.hansnose.net

MX:@:80:mail2.hansnose.net

CNAME:www2:some.other.domain.com

Example 2: **create dns-config** (with wildcard-matching)

subject: create dns-config [your reference id]

domainid:hansnose.net

A:www:194.33.110.19

A:@:194.33.110.19

A:*:194.33.110.20

Example 3: **create dns-config** (with dns-based url-forwarding)

subject: create dns-config [your reference id]

domainid:hansnose.net

A:www:194.33.110.19

A:@:194.33.110.19

URL:www2:http://www.sone.other.domain.com/index.html

(that means, the url within the browserbar is changing to the target address)

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

DNS/URL-Forwarding

Example 4: **create dns-config** (with frame-based url-forwarding)

subject: create dns-config [your reference id]

domains0:hansnose.net

A:www:194.33.110.19

A:@:194.33.110.19

FRAME:www2:http://www.sone.other.domain.com/index.html

*(that means, the url within the browserbar is **not** changing to the target address)*

Keywords: nameserver, records, zone, forwarding

Last update: 2011-08-11 15:37

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

DNS/URL-Forwarding

Delete a dns-configuration

Introduction

With this request you can delete a zonefile at the joker-nameserver.

Request fields

mailsubject: delete dns-config [your reference id]

Definition of this request

request field	valid values	required
domainlist	[domain]	yes

Example 1: **delete dns-config**

subject: delete dns-config [your reference id]
domainlist hamenose.net

Keywords: nameserver,dns-config,records, forwarding

Last update: 2011-08-11 15:37

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

List a dns-configuration

Introduction

With this request you can get a listing of a current zonefile.

Request fields

mailsubject: list dns-config [your reference id] definition of this request

request-field	valid values	required
domains0	@fqdn	yes

Example 1: **list dns-config**

subject: list dns-config [your reference id]

domains0:hansnose.net

Keywords: nameserver,dns-config,records, forwarding

Last update: 2011-08-11 15:38

DNS/URL-Forwarding

Create an order

Introduction

create <tld>-order

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn
- eu
- xxx
- asia
- me

With this request you can register one or more domains.

You have to provide the following information within the request:

- domain name(s),
- owner-contact-handle,
- admin-contact-handle,
- tech-contact-handle,
- billing-contact-handle,
- nameserver information,
- additional services, if required.

You can register up to 501 domains with one request.

If you register more than one domain with a request, all domains registerd with this request will have the same contact and nameserver structure.

There are two new requestfields within this request:

- name

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

- address-3

ATTENTION

Please, refer to the table for the corresponding contact handles.

TLD	Contact handle
com	CCOM-<number>
net	CNET-<number>
org	CORG-<number>
info	C<number>-LRMS
biz	CNEU-<number>

Domains
Modify a domain

Introduction

modify <tld>-domain

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn
- eu
- xxx
- asia
- me

With this request you can modify existing domains. You have to provide the following information within the

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

request:

- the domainname,
- handle(s) you want to change. (handles from the info-system are not valid)

The system will ignore not specified handles, so you have to provide only the handles, you would like to change.

Changes within the owner-contact

In case of changing the owner-contact-handle, the system checks, if lname and/or fname and/or organization differ from the original owner-contact-handle. If there are differences these changes will be ignored.

Domains

Renew a domain

Introduction

renew <tld>-domain

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn

With this request you can renew up to 500 domains at Joker.com.

You have to provide the following information within the request:

- the domainname(s),
- the renewalperiod or the desired expirationyear

You can renew up to 500 domains with one request.

Due to the fact, that you can renew more than 1 domain with one request, the format is a little bit different from the other requests. Please check the given examples on how to specify the renewal period.
If the sum of the expire time and the renewal time is more then 10 years, we will reject your request.
This request is not working for domains, which are located on the old system. For these domains you have to check the documentation of the old system.

If you provide the expire year, this request will rejected, if the current expire year is greater than the desired. This feature prevents an error in case 1 renew-request is sent twice by mistake.

Request fields

mailsubject: renew <tld>-domain [your reference id]

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Domains

Definition of this request

You have to provide the domain name and the renewal period or the desired expire year using the format "YYYY" on one line. You have to seperate each field with a ";" (ASCII 059). The maximum for the renewal period is 9 years.

request-field	field values	required
domain[0..500]	[a-z0-9.-]{1,63}\.[a-z0-9-]{2,63}(:[0-9]{1,5})	yes

.COM renewal

Transfer a domain

Introduction

transfer <tld>domain

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn

With this request you can transfer a domain from 1 registrar to Joker.com.
You have to provide the following information within the request:

- the domain name,
- the auth-id,
- the billing-contact-handle,

You can transfer 1 com domain with one request.

If you transfer a domain to Joker.com the domain will be renewed for one year.

As you can see, we dont need information about the owner-contact. We will detect this information from the whois of the current registrar and we will create the contact-handle for the owner-contact automatically.

You need to provide us with a so called auth-id. You have to ask the current registrar for this auth-id. If you provide an invalid auth-id, the transfer will be declined by the current registrar.

As you can see, we need the billing-contact-handle. We recommend using a billing-handle with the email-address of your "robot-email". If you use a contact-handle with a different e-mail than your robot e-mail, you can't administer the transfered domain using the webinterface and the person with access to the email, which is shown in the provided billing-handle will have access using the web-interface.

If you don't have a com-contact-handle with your "robot-email", you have to create a com-handle using the "create com-contact" request.

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Domains

We do not need information about the nameservers. This information will be detected from the whois of the current registrar and we will create the nameservers if necessary.

This procedure implies, that an owner change or change of nameservers during the transfer-process is not possible.

Request fields

mailsubject: transfer <tld>-domain [your reference id]

ATTENTION:

You can transfer 1 domain with one request.

Domains

Delete a domain

Introduction

With this request you can delete a domain at Joker.com.

You have to provide the following information within the request:

- domain name(s),
- the special flag force

ATTENTION:

If you delete a domain within the first 72 hours after the registration, the registration-fee will be refunded to your account.

If Joker.com receives the delete-request more than 72 hours after the registration, you have to provide the flag "force:1", in order to accept that the registration-fee will not be refunded to your account. If you do not send the "force:1" in such a case, the request will be rejected.

Request fields

mailsubject: delete domain [your reference id]

Definition of this request

Please, do not forget to provide the domain name and the force-flag set to 1 if the domain is older 72h.

equest-field	alid values	equired
ld	(com|net|org|info|biz|mobi|name|de|cn|eu|us)	yes
sld	a-z0-9-]{1,63}	yes
orce	1|0	no

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

DELETE COM DOMAIN

Example 1: delete a domain during the first 72 hours after registration
subject: delete domain [your reference id]

tld:com
sld:frezel

Example 2: delete a domain after the first 72 hours after registration
subject: delete domain [your reference id]

tld:com
sld:frezel
force:1

Example 3: delete a domain only for the case that a refund is possible!
subject: delete domain [your reference id]

tld:com
sld:frezel
force:0

Keywords: delete-domain

Domains

List domains

Introduction

list domains

With this request you can get a list (lexicographically sorted) of all the domains, you have currently registered at joker.com.
You have to provide the target-registry within the request:

cno = .com/.net

com = .net

net = .net

org = .org

info = .info

biz = .biz

mobi = .mobi

name = .mobi

de = .de

cn = .cn

eu = .eu

us = .us

LIMITATIONS:

- Only 20.000 domains are listed. If you have more than 20.000 domains under 1 registry at joker.com, you have to track the domain names yourself.
- In case you have more than 20.000 domains at joker.com under 1 registry, this request will not work for you. The listing would be incomplete and it will be missing random domains.
- This request works only with the new joker.com system.

Request fields

mailsubject: list domains [your reference id]

Definition of this request:

required fields	valid values	optional
target	com,net,org,info,biz,mobi,name,de,cn,eu,us	tld

LIST DOMAINS

Example 1: list domains for .com-domains
subject: list domains [your reference id]
target:com

Example 2: list domains for .net-domains
subject: list domains [your reference id]
target:net

Example 3: list domains for .org-domains
subject: list domains [your reference id]
target:org

Example 4: list domains for .info-domains
subject: list domains [your reference id]
target:info

Example 5: list domains for .biz-domains
subject: list domains [your reference id]
target:biz

Domains
Lock a domain

Introduction

lock domain

With this request you can lock a domain in order to prevent fraudulent transfer attempts. If a domain is locked, each transfer-request from a foreign registrar will be declined.

You have to provide the following information within the request:

- domain name

You can lock 1 domain with one request.

Request fields

mailsubject: lock domain [your reference id]

Definition of this request

request-field	valid values	required
domain	domain	yes

Example 1: lock a domain
subject: lock domain [your reference id]

fqdn:minus-109.com

Keywords: lock-domain, protection

Last update: 2011-08-11 15:46

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Domains
Unlock a domain

Introduction

unlock domain

With this request you can unlock a domain. If you want to transfer a domain to a foreign registrar, the domain has to be unlocked.

You have to provide the following informations within the request:

- domain name

You can unlock 1 domain with one request.

Request fields

mailsubject: unlock domain [your reference id]

Definitions of this request

Parameter name	Valid values	Required
auth	password	yes

Example 1: unlock a domain

subject: unlock domain [your reference id]

fqdn minus-109.com

Keywords: unlock-domain, protection

Last update: 2011-08-11 15:46

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Domains
Get Auth-id

Introduction

With this request you can retrieve the auth-id for a particular domain. That request is needed only for the TLD's .org/.info/.biz.

You have to provide the following information within the request:

- domain name

You can retrieve the auth-id for 1 domain with one request.

Request fields

mail/subject: get auth-id [your reference id]

Definition of this request:

Request field	Valid values						Required
type							yes

Example 1: retrieve the auth-id for a .org-domain
subject: get auth-id [your reference id]
fqdn:minus-109.org

Example 2: retrieve the auth-id for a .biz-domain
subject: get auth-id [your reference id]
fqdn:minus-109.biz

Example 3: retrieve the auth-id for a .eu-domain
subject: get auth-id [your reference id]
fqdn:minus-109.eu

Keywords: transfer, auth-id

Last update: 2011-08-11 15:46

Domains

Grant Roles/Domain Permissions, Internal Transfer

Introduction

With this request you can assign 'Roles' (permissions) of domains to other Joker.com users. The special role "creator" is an equivalent to an internal transfer of that domain to another Joker.com user.In this case, the domain is assigned to the receiving account, including all rights and permissions on this domain.

There are two variants to use this functionality: If the user id (Joker.com user account-id) is given, and the account id matches the associated email address, the role is applied immediately - there will be no request for confirmation on the receiver's side. In case the user id is not given, but only the email address, the transaction has to be acknowledged by the receiver. For this, he will get an email, containing a link and a key. Either the link has to be clicked, or the key has to be applied using Joker.com (=> Transfer). This can also be used for users which do not yet have a Joker.com account.

You have to provide the following parameters:

- domain name (the domain you want to grant somebody else permissions on)
- destination client email (the email address of the user you want to receive permissions)

The following parameters are optional:

- destination client id (ID of Joker.com account - always shown in the upper right on Joker.com, also conforms to "reseller id" - must match the 'destination client email')
- desired role (type of permission you want to assign to "client email" resp. "client id" - one of "admin|tech|billing|creator"; "creator" means "all permissions" and is equivalent to an **internal transfer** or 'assignment' - also see 'roles')

Request fields

mailsubject: joker-internal-transfer [your reference id]

Definition of this request

Valid values for <tld> **all** Joker.com tlds

request-field	valid values	required
domain	[a-z0-9-]{1,63}\.<tld>	yes
destination-client-email	@email	yes
destination-client-id	[0-9]+	no
desired-role	admin|tech|billing|creator (if omitted, default is 'creator')	no

Example 1: assign 'billing'-role to user 123456 (direct)

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

subject: joker-internal-transfer [your reference id]

```
body:
fqdn:exampledomain.com
destination-client-email:example-user@gmail.com
destination-client-id:123456
desired-role:billing
```

Example 2: assign 'creator'-role to user 'example-user@gmail.com' (internal transfer with invitation)

subject: joker-internal-transfer [your reference id]

body:

```
fqdn:exampledomain.com
destination-client-email:example-user@gmail.com
desired-role:creator
```

Keywords: grants, roles, contacts, permissions, invitations

Domains

Create a contact

Introduction

create <tld>-order

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn
- eu

With this request you can create person contacts. You can create 1 contact with one request.

ATTENTION:

You will find the request-field "individual" within the request-definition. If you set it to "Y", you have to provide the request-fields "fname" and "lname" or "name". If you set it to "N", you have to provide information in the request-field "organization".

As the whois for .com shows a field called person, the rules for generating this field are the following:
If you provide the field "name", the whois is showing always the values of this field, regardless of "fname" and "lname".

If you only provide the field "fname" and the field "lname", we will generate the field "name" as the result of the concatenation of "fname" + " " + "lname".

The result of "create com-contact" is a reference which is following the format:

- CCOM-<number> e.g. CCOM-176269 for a .com domain.
- CNET-<number> e.g. CNET-176269 for a .net domain.
- CORG-<number> e.g. CORG-176269 for a .org domain.
- C<number>-LRMS e.g. C176269-LRMS for a .info domain.
- CNEU-<number> e.g. CNEU-176269 for a .biz domain.
- COMO-<number> e.g. COMO-176269 for a .mobi domain.
- CNAM-<number> e.g. CNAM-176269 for a .name domain.
- CDUS-<number> e.g. CDUS-176269 for a .us domain.
- CDDE-<number> e.g. CDDE-176269 for a .de domain.
- CDCN-<number> e.g. CDCN-176269 for a .cn domain.
- C<number> e.g. C176269 for a .eu domain.

Request fields

mailsubject: create <tld>-contact [your reference id]

Contacts

Modify a contact

Introduction

With this request you can modify person contacts. You can modify 1 contact with one request. Unspecified request-fields will be ignored.

ATTENTION:

After changing the content of the specified contact, the whois information is automatically updated.

Keep in mind that you have to provide the numerical suffix of a handle.

- If you want to make an address change within the owner-record of a domain, you have to send a "modify com-domain"-request after changing the content of the specified handle.
- Only contact-handles, which are created by the reseller or where the e-mail within the contact is matching the reseller's robot-email can be changed.

Definition of this request

request-field	valid values		required

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Contacts

.asia Contacts

new-handle (implicit creation of a new contact)

This means the definition of a new contact. if a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format COAS-<number>, e.g. COAS-176269.

ATTENTION:

The name of the request field depends on the context. If you want to create a contact for the owner-contact, you have to replace the ".." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the ".." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the ".." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the ".." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **fnamelname**. You have to provide the request field **name**, if **fname** and **lname** are not found. This is very important for the whois output. Everytime a field **person** is shown. If you are using the request field name, the whois is showing the value for **name**, regardless the content of the request fields **fname** and **lname**. If you do not provide the request field **name** but your are providing the request fields **fname** and **lname**, the whois is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request-field	valid values	required
".."-individual	[YN]	yes
".."-lname	[\x20-\x7e]{0,80}	no, if name is given
".."-fname	[\x20-\x7e]{0,80}	no, if name is given
".."-name	[\x20-\x7e]{0,80}	yes, if fname **and/or** lname are not given
".."-title	[\x20-\x7e]{0,80}	no
".."-organization	[\x20-\x7e]{0,80}	yes, if individual = N
".."-address-1	[\x20-\x7e]{1,80}	yes
".."-address-2	[\x20-\x7e]{0,80}	no
".."-address-3	[\x20-\x7e]{0,80}	no
".."-postal-code	[\x20-\x7e]{1,50}	yes
".."-city	[\x20-\x7e]{1,80}	yes
".."-state	[\x20-\x7e]{0,80}	no
".."-country	@country	yes
".."-email	@email	yes
".."-phone	[\x20-\x7e]{1,50}	yes
".."-fax	[\x20-\x7e]{0,50}	no

(c) 2023 Joker.com <webmaster@joker.com> | 2023-08-04 02:49

Contacts

An existing contact (**@asiacont** or **@same-as**) (.asia only)

This means an existing contact handle in the JOKER-DATABASE.

Examples:

owner-contact-handle:COAS-176269
admin-contact-handle:COAA-176229
tech-contact-handle:COAS-176269
billing-contact-handle:COAS-176269

ASIA-domains require an additional type of contact, the CED contact. This contact has to have its residence in the Asian/Australian area.

The Joker.com Registry Gateways automatically will use your provided tech-contact for the CED contact.

This means that the request for you remains consistent with the usual requests, you only have to make sure that the country code is correct, otherwise the .asia registry will reject the order.

In case you have entered a non-existing contact handle, the system will send you an errormail.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle:same-as-owner-contact

tech-contact-handle:same-as-admin-contact

billing-contact-handle:same-as-tech-contact

The **@same-as** makro always replaces the value for the specified contact handle with the email address of the makrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for .asia-requests the contact handles for (.com/.net/.org/.info/.biz/.de)-contacts are not allowed. If you are referencing to a shortcut like hans@nose.net#1, you will get an error.

Keywords: whois, contacts, asia

Create a nameserver

Introduction

create <tld>-ns

Valid values for <tld>:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- de
- cn
- eu

With this request you can create an entry for a nameserver in the Joker.com database. If a nameserver is created, you can reference this nameserver using the hostname during a "create order"-request.

ATTENTION:

Only nameservers, which Joker.com is respondsible for, will be shown with the ip-address in the whois-output.

If you submit a "create-ns"-request for a nameserver under a domain, which is not registered with Joker.com or for a nameserver under a country-code-domain, the values for the ip-addresses are ignored.

Request fields

mailsubject: create <tld>-ns [your reference id]

<table>
<tr><th>request-field</th><th>valid values</th><th>required</th></tr>
<tr><td>ns-domain-name</td><td>([a-z0-9-]{1,63}\.)+(@country|com|net|org|int|edu|mil|biz|info|mobi|name)</td><td>yes</td></tr>
<tr><td>ns-ip-address</td><td>@ip</td><td>yes</td></tr>
</table>
