1.8 Renewals How to renew a domain?

Renew a Domain

Renewing a domain means, adding years to the lifetime of a domain.

You can usually choose to add **from 1 to 10 years**, which depends on the type of domain (TLD).

The lifetime will be **added** to the expiration date, i.e. if you renew before the expiration date, you will not lose the remaining term.

Other options like "Domain Privacy" can also be maintained in the <u>renewal section</u> on Joker.com.

In order to renew a domain, please visit Joker.com 'Renew a Domain'.

[new] <u>Automatic renewals</u> can also be activated for all domains - this ensures that no renewal is missed.
