

1.9 Nameservice

What is the difference between a 'ns resource record' and a 'ns record'?

Name Server Resource Record

The **name server resource record** (or **glue record**) describes the **IP address of a name server** associated with a (your) domain. This allows you to "find" the name server first.

Use 'Create/Change Nameservers' at ['My Domains'](#) to create such records.

The **contents** of the name server or the "[name server records](#)" describe the **services** you offer, and the corresponding names and IP addresses for these services (e.g. 'www.my-sample-domain.com' has the IP address '192.168.1.1').

In case you chose Joker.com as your free name service provider, please click on '**DNS**' at ['My Domains'](#) to find [all usable types of records](#).
