1.11 URL/Web Forward and -Redirect What is URL Forwarding (Web Forwarding)?

URL Forwarding

This is a service provided by Joker.com that allows directing all **HTTP (web) requests** for a domain (or subdomain) registered with Joker.com to the **webspace** of a different, externally hosted domain, e.g. the webspace which is usually included in Internet provider contracts.

This feature enables you to access e.g. 'http://www.[your-domain].com', with the real content residing at 'http://www.[your-internet-service-provider].com/[your Account]'.

The redirection is of type 'HTTP/1.1 301 Moved Permanently'.

You can use a standard redirection, or a so-called "frame-based" redirection, which will keep the original domain name visible in your browser's location bar.

You are also able to provide your URL forwards with your own special title-, meta- or HTTP header tags.

To configure your URL forwarding, please visit the "**DNS**" menu in "<u>My Domains</u>" with the domain you want to add URL forwards to, click on "+ New" and select **URL-Forwarding** as Record-Type.

Please also consider How to create a name server (-record)?
