1.12 Domain Contacts How to create or modify a contact?

Add or modify Domain Contacts

Please login to <u>Joker.com</u> using your login name and your password.

In the menu 'My Joker', choose the item 'My Contacts'.

You will find all your contacts listed - please choose "Modify" to change any of them if needed.

To create a new contact, please use "Create New Contact" button on the top right.

Please note: A contact is a kind of 'template', consisting of an email, name and street address.

If you populate a domain with Whois data, you create such a contact (or choose an existing one) and assign this contact to a domain.

You are free to assign **individual contacts to each domain** or use a **single contact** for more than one domain. In this case, it is important to know that in case you change such a contact afterwards, those changes will automatically **apply to all domains** which have been assigned to this contact.

A contact can be identified by its "contact-id", also known as 'handle'. Examples are "CCOM-12345" (.com domains) or "CODE-12345" (.de domains).

Please find out more in What are 'contacts'?
