Account and Handling login

Login with Username & Password

Requires (mandatory):

username	Joker.com username (email address)
password	Joker.com password

Returns:

	Authenticated Session ID, must be provided with any other request (parameter <i>auth-sid</i>)
2.00 01 1220	List of domain TLDs which are available to the reseller.

To be able to use the entire API, you must have a reseller account with Joker.com (and use this account to log in).

Example:

https://dmapi.joker.com/request/login?username=johndoe&password=mypass

Login with API Keys

Instead of using your user- and password credentials, you may also use so called 'API keys' for login. This way, you can create several DMAPI access facilities, which has several advantages:

- you do not need to expose username and password in your scripts
- API keys can be restricted to be "read only" (no modifications possible), or to allow 'modifications only' (can not produce costs)
- you may hand API keys to your staff to enable them to do specific things with Joker.com

Account and Handling

Example usage:

https://dmapi.joker.com/request/login?apikey=Key_created_in_your_Profile_at_Joker.com

The result is the same as for "login"-request, you have to use the provided auth-sid for the subsequent actions.
