

Domains

domain-set-property

Requires (mandatory)

<i>domain</i>	domain name or pattern
<i>pname</i>	property name
<i>pvalue</i>	property value (may be empty)

With this request you can set a property (flag) for a domain or a set of domains, selected by wildcard pattern.

List of available properties and their effects:

<i>autorenew</i>	0 or 1	If set to 1, the domain will be automatically renewed before expiration (if you have enough funds in your account)
<i>whois-opt-out</i>	0 or 1	currently only used for .tel domains; if set to 1, whois information will not be shown in whois
<i>privacy</i>		off or basic or pro (if available)

If an empty value is provided, then the property will be cleared, i.e. the default will be used.

Example:

```
https://dmapi.joker.com/request/domain-set-property?domain=example.com&pname=autorenew&pvalue=1&auth-sid=<your-current-session-id>
```
