

1.3 Domain Registration

What length is allowed for a domain name?

Length of a Domain Name

We support a maximum length of **67 characters** (including the endings). A **minimum of 2** (not including the endings) is required by most registries.

The domain name can not start with a hyphen "-", and many domains can not start with "bq-", or have hyphens "--" at the third and fourth position.

Unique solution ID: #1054
