1.14 Billing and Payment Credit Card limits

Credits Card Limits

Only credit cards which are not participating in the <u>Verified by Visa / Mastercard Secure</u> security processes might be validated by Joker.com, in case certain limits are reached. Cards which take part in one of these security programs do not have to be validated and do not have a special limit.

In case validation is triggered, this will happen automatically. This has to be done only once, and after this, the limit is cleared.

Usually, the validation of non-VbV/MsC cards does not take more than **4 hours**, if your credit card validation request has been submitted before 12.00 UTC.
