

Macros

.name Contacts

new-handle (explicit creation of a new contact)

This means the definition of a new contact: if a contact with the provided email address exists in the JOKER DATABASE, a new contact will be created. The reference for the created handle is following the format CNAM-*number*, e.g. CNAM-17020.

ATTENTION

The name of the request field depends on the contact: if you want to create a contact for the owner-contact, you have to replace the "." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the "." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the "." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the "." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory: if you do not provide the **name** and **handle**. You have to provide the request field **name**, if **name** and **handle** are not found. This is very important for the whole output. Everywhere a field **person** is shown. If you are using the request field **name**, the whole is showing the value for **name**, regardless the content of the request fields **name** and **handle**. If you do not provide the request field **name** but you are providing the request fields **name** and **handle**, the whole is showing the concatenation of these fields.

There is also a new request field called **address-2** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request field	request value	response
new-handle	17	OK
name	200-547(2)100	OK if name is green
name	200-547(2)100	OK if name is green
name	200-547(2)100	OK if name and/or handle are not green
name	200-547(2)100	OK
organization	200-547(2)100	OK if organization is OK
address-1	200-547(2)100	OK
address-2	200-547(2)100	OK
address-3	200-547(2)100	OK
city	200-547(2)100	OK
state	200-547(2)100	OK
country	200-547(2)100	OK
zip	200-547(2)100	OK

Macros

NAME	DESCRIPTION	TYPE
NAME	DESCRIPTION	TYPE

An existing contact (@namecontact or @name-ns) (name only)

This means an existing contact handle in the JOKER DATABASE.

Example:

```
owner-contact-handle-CHAMA-171225  
admin-contact-handle-CHAMA-171225  
tech-contact-handle-CHAMA-171225  
billing-contact-handle-CHAMA-171225
```

In case you have entered a non-existing contact handle, the system will send you an error!

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

```
admin-contact-handle-name-as-owner-contact
```

```
tech-contact-handle-name-as-admin-contact
```

```
billing-contact-handle-name-as-tech-contact
```

The @name-as syntax always replaces the value for the specified contact handle with the email address of the macrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for name-as requests the contact handles for [cost.net] contacts are not allowed. If you are referencing to a shortcut like name@cost.net, you will get an error.
