

# Domains

## Transfer a domain

Introduction

Transfer .com-domain

Valid values for .com:

- com
- net
- org
- info
- biz
- mobi
- name
- us
- ca
- mx

With this request you can transfer a domain from 1 register to Joker.com.  
You have to provide the following information within the request:

- the domain name,
- the auth-id,
- the billing contact handle.

You can transfer 1 .com domain with one request.

If you transfer a domain to Joker.com the domain will be renewed for one year.

As you can see, we don't need information about the owner contact. We will detect the information from the whole of the current register and we will create the contact handle for the owner contact automatically.

You need to provide us with a so called auth-id. You have to ask the current register for this auth-id. If you provide an invalid auth-id, the transfer will be declined by the current register.

As you can see, we need the billing contact handle. We recommend using a billing handle with the email address of your "total-admin". If you use a contact handle with a different e-mail than your total e-mail, you can't administer the transferred domain using the webinterface and the person with access to the email, which is shown in the provided billing handle will have access using the web-interface.

If you don't have a com-contact handle with your "total-admin", you have to create a com-handle using the "create com-contact" request.

# Domains

We do not need information about the nameservers. This information will be detected from the whois of the current registrar and we will create the nameservers if necessary.

This procedure implies, that an owner change or change of nameservers during the transfer process is not possible.

## Request fields

mailsubject: transfer-info-domain [your reference id]

## ATTENTION

You can transfer 1 domain with one request.

Definition of the request

Request field	Request content	Example
