.asia Contacts

new-handle (explicit creation of a new contact)

This means the definition of a new contact. If a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CDSG-number>, e.g. CDSG-216288.

ATTENTION

The name of the request field depends on the context. If you want to create a contact for the owner contact, you have to replace the "-" at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the "-" at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the "-" at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the "-" at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory, if you do not provide the **firstname**. You have to provide the request field **name**, if **name** and **name** are not found. This is very important for the whole output. Everywhere a field **person** is shown, if you are using the request field **name**, the value is showing the value for **name**, regardless the content of the request field **name** and **name**. If you do not provide the request field **name** but you are providing the request field **name** and **name**, the value is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory, it is simply the 3rd line of the address.

request field	url domain	comment
contactid	id	id
name	CDG-216288	id, if name is given
name	CDG-216288	id, if name is given
name	CDG-216288	id, if name is given
name	CDG-216288	id, if name is given, name is not given
name	CDG-216288	id
organization	CDG-216288	id, if organization is given
address-1	CDG-216288	id
address-2	CDG-216288	id
address-3	CDG-216288	id
contact email	CDG-216288	id
city	CDG-216288	id
state	CDG-216288	id
country	CDG-216288	id
phone	CDG-216288	id
fax	CDG-216288	id

Contacts

An existing contact (@name@ or @name-@) (asia only)

This means an existing contact handle in the JOKER DATABASE.

Example:

current-contact-handle:COAG-170209
admin-contact-handle:COAG-170209
tech-contact-handle:COAG-170209
billing-contact-handle:COAG-170209

Asia domains require an additional type of contact, the CED contact. This contact has to have its residence in the **AsiaRegistration area**.

The **Joker.com Registry Gateway** automatically will use your provided tech-contact for the CED contact.

This means that the request for you remains consistent with the usual requests, you only have to make sure that the country code is correct, otherwise the asia registry will reject the order.

In case you have entered a non-existing contact handle, the system will send you an errorcode.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

admin-contact-handle: name-as-master-contact

tech-contact-handle: name-as-admin-contact

billing-contact-handle: name-as-tech-contact

The **@name-as** makes always replace the value for the specified contact handle with the email address of the mastercontact. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for asia requests the contact handles for (.com|.net|.org|.info|.biz|.de)-contacts are not allowed. If you are referencing to a shortcut like **hans@rose.net/1**, you will get an error.
