

1.16 FAQ for specific Top Level Domains

.LUXE - How to use with ENS

How to use ENS with .LUXE domains

ENS - the [Ethereum Name Service](#) - offers a secure & decentralised way to address resources both on and off the blockchain using simple, **human-readable names**. You can use your .luxe-domain to act as such a name.

.luxe is a top-level domain that is fully compatible with the [Ethereum Name Service](#) (ENS). This means .luxe names can both resolve over the World Wide Web like any traditional domain name but also be **securely associated to the Ethereum wallet address** of your choice in ENS. **Yourname.luxe** can be paired with `0x32a4c9fa3d46ab6e87f...` — no technical wizardry required.

To enable ENS for your .luxe domain, please visit '[My Domains](#)', and click on 'Modify' using your selected domain. Then please choose ENS,

and click on "change". Then enter your Ethereum address:

Congratulations! You now have successfully associated your .luxe domain with the Ethereum Name Service.
