1.6 Change of Owner What is an 'UDRP' Procedure?

UDRP Procedures

UDRP means <u>Uniform Domain-Name Dispute-Resolution Policy</u> and is a policy that is applied to all ICANN domains and is also adopted by many other domain types (ccTLDs). You will find detailed explanations on <u>Wikipedia</u> as well.

When registering a domain, you have to accept this policy in order to purchase a domain. This is included in our Terms & Conditions, section 11).

The UDRP process deals with *domain ownership complaints*. In case the arbitrator decides that a domain is to be transferred to the **complainant**, this transfer must be **initiated by the complainant**, who became the **new owner**.

In case you as the complainant have been awarded the domain after a UDRP decision, please follow these steps to get access to the domain:

- please <u>create a Joker.com</u> account, if not already available; this is free of charge and ensures the fastest handling
- please provide us with the customer id of this account (please send it to udrp@ioker.com)
- we will then immediately transfer the domain into your Joker.com account

Please note:

The domain will be **blocked for changes** (status 'freeze') for the duration of the UDRP procedure. After the execution of the UDRP decision, the domain will be set to status *normal* again.

Unique solution ID: #1080
